How can I help prevent stormwater pollution?

Stormwater pollution occurs when rain washes soil, chemicals, trash, pet poop and other pollutants into stormdrains which empty into desert washes. Our wildlife depends on washes for water, pathways and habitat. Here are some simple ways you can protect your community and the environment from stormwater pollution:

- ✓ **Don't be a Litter Bug**
  When it rains, water can carry litter from streets and sidewalks into our fragile desert washes. This is bad news for frogs, birds and other wildlife. Be a good example for your friends and family - throw trash in the garbage!

- ✓ **Pick up Where your Dog Left Off**
  Pet poop is home to bacteria and other germs. These germs can live in washes for several months and can make wildlife and people sick. Bring a bag with you when you walk your dog. When your dog does its business, scoop the poop into the bag and throw it into the garbage. It's that simple!

- ✓ **Remember the 3 Rs: Reduce, Reuse, Recycle**
  The less trash you produce, the less likely that trash will make it into stormdrains and desert washes. Encourage your family to choose products that use less packaging and to recycle glass, paper and most types of plastic. Every little bit counts!
