When it rains, stormwater can mix with trash, dog poop and chemicals on the ground and in the streets. Follow the arrows to find out where stormwater goes when it flows off your yard.

Find and circle the pollutants before they are carried into the wash.
Save the water!

Follow the arrows to find out where water collects when you harvest rainwater.

Soils in rain gardens filter water that is collected from our streets and yards. This helps water plants and prevents stormwater from carrying pollutants to our fragile desert washes.
